...

Oracle Berkeley DB Java Edition is an open source, embeddable, key-value database written entirely in Java. Like Oracle Berkeley DB, Oracle Berkeley DB Java Edition executes in the address space of the application, without the overhead of client/server communication. Oracle Berkeley DB Java Edition takes full advantage of the Java environment to simplify development and deployment.

Berkeley DB Java Edition | Database | Oracle

Berkeley DB Java Edition is not a relational engine built in Java. It is a Berkeley DB-style embedded store, with an interface designed for programmers, not DBAs. The architecture is based on a log-based, no-overwrite storage system, enabling high concurrency and speed while providing ACID transactions and record-level locking.

Introduction to persistency and Berkeley DB

The Oracle Berkeley DB family of open source, embeddable databases provides developers with fast, reliable, local persistence with zero administration. Often deployed as an 'edge' database, Oracle Berkeley DB provides very high performance, reliability, scalability, and availability for application use cases that do not require SQL

Oracle Berkeley DB

A Berkeley DB database is accessed by an API, using Java method calls. Unlike some other databases that can be run in embedded mode (for example, HSQL), Berkeley DB does not use a declarative query syntax like SQL, and results are not returned in instances of ResultSet. Another consequence of this is that the data mapping code is more explicit.
