The table below lists the medical device packaging standards recognized by the FDA. For a complete list of all standards recognized by the FDA, visit their site at www.fda.gov. Enter "consensus standards" into their search engine and follow the links to their standards database.

FDA Consensus Standards - Institute of Packaging Professionals

Poor packaging can cause a host of problems for medical device companies and their customers. A package that holds a sterile medical device not only has to arrive at the hospital or clinic free of holes, tears and broken seals, it also has to withstand sitting on a shelf, possibly for years, without breaking down.

Medical Devices | FDA

Medical devices range from simple devices, to test equipment, to implants. Plastics are used more and more in these devices, for weight, cost, and performance purposes. Examples of medical devices include surgical instruments, catheters, coronary stents, pacemakers, magnetic resonance imaging (MRI) machines, X-ray machines, prosthetic limbs.

Medical Device Packaging: Innovations in design and testing

Packaging (519 companies found) The medical device industry places a premium on sterile, unadulterated medicines and devices. Thus, it is imperative that medical devices be encased in durable, tamper-resistant packages. The functions of medical device packaging equipment run the gamut from sealing and soldering, to blister packaging and crimping.
